

### 1. Products

(1) Product introduction: Elite Screens motorized screen automatic trigger is a fully automatic remote control device, which is connected to the power supply of the projector to achieve synchronous operation of the projector and Elite motorized screen. Thus the electric screen products of Elite Screens can be faster and more humanized.

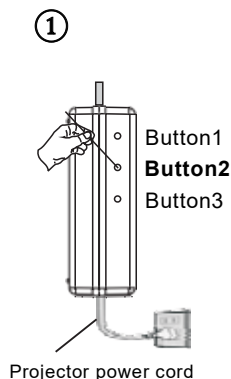

(2) Schematic diagram of the trigger:

Trigger working diagram

### 2. The use of instructions

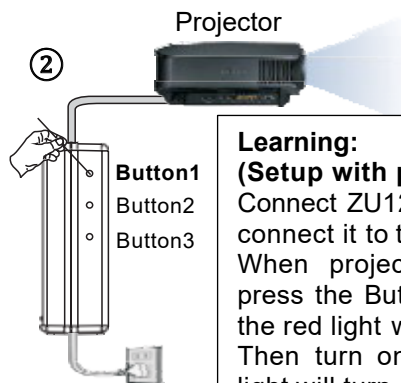

Before using, please keep the power supply of the trigger, projector and Elite Screens motorized screen are disconnected, and unplug the power cord of the projector and connect it to the trigger, then work on the code pairing.

#### Code learning: (Pairing with screen)

Use wall box to connect to the screen, press the "Program" key + "UP" key on wall box to enter the learning mode, then press and hold the ZU12V1 Button2 for 3 seconds, and the wall box light will disappear, code learning is successful.

Note: After using ZU12V1 to learn the code, the RF code on the back of the RF remote control must be adjusted to "000" mode and then can continue using it.

#### Learning: (Setup with projector)

Connect ZU12V1 to the projector and connect it to the power supply. When projector is power off, long press the Button1 for 3 seconds, and the red light will flash.

Then turn on the projector, and the light will turn on for a long time. Final step, turn off the projector, and the red light will turn off, learning is successful.

#### Reverse direction: (Additional feature)

Press Button3 and then hold the Button3 for 10 seconds, and the green light will flash to complete the reverse direction.

Note: After adjusting the reversing function, it will affect the direction of the projector's on/off action on the screen. Currently, this feature is only available for Kestrel series products now.

- ※ The effective control range of the trigger is within 25 meters.
- ※ ZU12V1 trigger can only be used for Elite Screens motorized screen, not for other products.
