

Sleek EDGE FREE® Design

Optional LED backlight kit

The **Aeon Series** is a fixed frame projection screen that uses Elite's EDGE FREE® technology. EDGE FREE® means that there is no external framework (edge) bordering the material as seen in traditional frame-screens. The design utilizes an internal frame with wrap-around material that resembles a giant size flat panel display. The Aeon includes a black velvet trim edge strip as an option to further enhance the overall appearance.

Front Projection Screen Material Options:

CineWhite® (matte white) – Broad light dispersion through diffusion uniformity, black and white contrast and true color rendition. Gain 1.1/180° viewing angle. Recommended for environments with controlled lighting.

 **CineGrey 3D® (ambient light rejecting)** – Ambient Light Rejecting material for environments with minimal control room lighting. ISF Certified for color accuracy. Gain 1.2/90° viewing angle.

CineGrey (high contrast grey) – It enhances black levels and color contrast while maintaining a neutral color temperature. Gain 1.0/160° viewing angle. Recommended for environments with controlled lighting.

AcousticPro UHD (acoustically transparent) – Its design maximizes sound penetration with minimal attenuation without compromising picture quality. Gain 1.0/180° viewing angle. Recommended for environments with controlled lighting.

Design and Installation:

- Aluminum light-weight split-frame design
- Stretches over frame for a permanent tight-tensioned flat surface
- Easy to assemble and install in minutes
- Smaller footprint maximizes viewing area
- EDGE FREE® or install ultra-thin velvet tape trim
- Wall mount brackets slide ensuring the frame is properly centered
- Optional LED backlight kit with IR remote (sold separately)
