

Shown here on DIY Pro Series

DynaWhite is a professionally engineered theater-grade PVC material for outdoor use. It eliminates all of the problems encountered when trying to project on regular sheet fabrics. Its 1.1 gain matte white projection surface is texture to avoid hot-spotting while providing color neutrality, and a wide viewing angle. Each screen is professionally matted to enhance visual contrast and to absorb the light “bleed” of the projected image. All these features allow the average person to use it and make the DynaWhite Outdoor Movie Projection Screen Material a treasured asset for many seasonal events to come.

Elite Screen series:
DIY, DIY Pro

On axis 0° Gain: 1.1
Viewing Cone: 160°
