

Front Projection Tensioned PVC Pearlescent Screen Material

Elite's **PowerGain** is perfect for environments where total ambient light control cannot be attained. This is an angular reflective material that provides crisp color reproduction, black & white contrast and resists hot spotting in the presence of ambient light. The textured pearlescent material has black-backing to avoid light penetration and is safely washable with mild soap and water. *Manufacturer's tip: Use a high resolution-low output DLP projector for the best results with this material.

(shown here with Elite PrimeVision)

Elite Screens Series: CineTension 2(3), ezFrame, Elite PrimeVision, SilverFrame

- Multi-Layer PVC with Texture and Surface Coating
- Gain: 1.8
- View Angle: 120° (60° ±LR)
