

Designer Cut Series- CineGrey **High Contrast Grey Projection Material**

Elite Screens wants you to enjoy your Designer Cut Projection Screen to its full extent and for many years to come! We made the Designer Cut materials available for you to be able to fully customize your projection experience, however, please note that ALL Designer Cut materials do require specific properties to be adhered during installation to obtain an enjoyable viewing experience.

The **CineGrey** material has a high contrast grey finish on the front and is black on the back. This black backing prevents light penetration from behind.

Care & Use

Please follow this general rule of thumb for all Designer Cut screens

- Only Project onto the “Front” of material
- Stretch material taught over any frame/structure of your choice
- Never place your screen over a window or under consistent sun exposure

NOTE: Direct sunlight destroys projector screen materials. Solar radiation breaks down cloth and synthetic projection materials, so it is best to keep them away from direct sunlight.

Installation Tips

- If you are using a staple or nail gun to stretch your material over a custom frame/structure you can reinforce the puncture area with a duct tape strip to prevent tearing the material as its being stretched.
- For best picture quality results, maintain a minimum viewing distance if possible 1.5 times the width of your projection image. ***NOTE: Sharp metal implements such as thumb tacks or nails will cause the material to tear under its own weight when improperly applied.***

Material Maintenance

Wrinkles/Creases: The material may have minor wrinkles which will get removed after stretching it tightly over a frame or a mounting system that allows tensioning.

Dust/Dirt: A feather duster should be used to remove loose dirt or dust. Use mild soap and warm water on a microfiber cloth to clean dirt or dust spots. Do not rub or scrape the material.

Note: The 135” size listed for this series is referring to the diagonal measurement of the screen material
