

## DESCRIPTION

The CineWhite® ISF a flexible matte white 1.1 gain front projection screen material that is certified by the world-renowned Imaging Science Foundation for its accurate color reproduction and offers exceptional high resolution performance. It has wide diffusion uniformity that allows equal brightness levels over a 180° viewing angle.

The tension PVC material construction has the needed pliability to maximize flatness in a “roll-up” projection surface. The versatile properties of this material make it a natural fit with either standard, short-throw or ultra-short throw projectors.

### FEATURED SERIES: VMAX Tab-Tension 3 Series

## MATERIAL SPECIFICATIONS

- Gain: 1.1 | Viewing Angle: 180° (90°LR)
- Tensioned matte white front projection material for light controlled rooms
- White backed screen material
- Wide diffusion uniformity allows viewers to enjoy a clear picture of equal brightness from any angle
- 4K/8K Ultra HD, Active 3D, HDR Ready
- ISF Certified for accurate reproduction – An industry standard for high-fidelity video display systems
- Can be cleaned using mild soap and water solution
- Suited for either residential or commercial applications
- Compatible with Ultra, Short and Standard throw projectors
