

# ImpactWhite® 360 Material

Single-Layer Golf Impact Projection Material

## DESCRIPTION

The *ImpactWhite® 360* is a single-layer tightly woven impact/projector screen fabric designed to endure golf ball impact and longevity. The projection surface is smooth and does not color shift to ensure exceptional cinema quality presentations for high-resolution projectors. It is also ideal for use with any other sport simulation applications.

Shown here on GolfSim DIY Series

## MATERIAL SPECIFICATIONS

- ImpactWhite® 360 golf impact front projection material
- 1.0 gain with a 180° wide viewing angle allows viewers to see a clear bright uniform picture from any angle
- Resists golf impact and withstands ball speeds up to 200 mph.
- ISF Certified for accurate color reproduction
- 1.2 mm tightly woven polyester material offers minimal impact noise and bounce back
- Allows a clear and sharp presentation without loss of image fidelity
- Designed and engineered to perform to high-level industry standards for cinema quality presentations

**Color:** White

**Thickness:** 0.047" (1.2 mm)

**Number of Layers:** 1

**Material Composition:** 100% Polyester

**Weight:** 0.79 lb. (360 g) /m2

**Max Roll Width:** 125.9" (3200 mm)

**Effective Width:** 123.9" (3148 mm)

**Gain:** 1.0

**Viewing Angle:** 180°

**Projection Method:** Front

**Withstands golf speeds up to:** 200 mph

**Impact rebound Distance:** 5.2 ft

## GAIN CHART
